The Spaceship Leaves

The End is Near: MK Buys Fancy Toilet Paper for Everyone!

By Dr. Nothing :: Communication Art

Only a trail of smoke clouds are what remains in the dream.

Multikulti is actually a spaceship that took off. In his dream, Katalyst reports that

Dr. Katalyst had a dream that he discovered that the 4th floor of the building that is multikulti

our landlord was shocked in awe and unable to respond as he stood on the 3rd floor watching his property drop in value-- all this happening on the day our lease was suppose to end. Our landlord was out of any legal recourse since the address is adherent to a property tax plot coordinate and not to any particular structure.

"I would not have been able to frame this impression of Ted had it only been 1 ply paper." says Mr. Yiddish

Disclaimer: This is fictional humor that may or may not parallel your understanding of the truth. However access to the eye of the mind is universal without the the Great Wall of Floride and congestion caused by the High Fruiteose Corn Syrup found in your Cola.

Fracking Companies Now Sell Water and Fire From the Same Source

Dr. Katalyst

Dr. Nothing is preparing his faucet for cooking some sweet corn over an open fire.

"People need water, and people need to heat their homes and cook their food" says Bernie Bushwhacker from the company Frack America USA. Now fracking companies have come up with an innovative way for people to get both these utilities right from the convenience of their kitchen or bathroom faucet. Through high pressured horizontal fracturing, natural gas companies are drilling in neighborhoods around the country to provide a unique service, allowing the methane gas trapped deep in the earth to seep into the aquifers where they can be utilized by residents. Residents are already showing excitement... "now i can light my tap water on fire!" said Jacob Haughney of

North Dakota. Some people have already noticed that their water even tastes better, having a preferred "barbecue flavor". The EPA is working side by side with fracking lobbyists to work out some minor paperwork that would change the wording of current federal regulations which currently classify the frack fluids as "hazardous contaminants" to the more industry friendly term of "essential nutrients". This could further the fracking boom allowing companies to sell the chemical byproducts to local residents as an added ingredient in the municipal water supply. "People want to do more with their water" says industry spokesmen Kimberly Jenkins "this is the 21st century...people expect more now a days." Now water doesn't just evaporate when heated, but will coagulate these special frack fluids, and when you light it with a torch it plasticizes. "Now people can even get plastic right from their tap water, how awesome is that!" said Rich Ashole who stands to make a fortune from the fracking boom.

Chicago Upgrades Computers from Windows 8 to Commodore 64

By Dr. Nothing :: Communication Art

The Legacy Is Best computer group convinced the tech council and affiliates for the City of Chicago to revert back to 30 year old technology in order to get things done on time and make hack attacks virtually impossible. "We love the new system," Conord replies. "I know that when I type a word that it will appear instantly and not have to wait for the computer to catch up to be ready for my input." Wilson agreed that this is the best system in a long time "we know that our public works officials won't be distracted by things like facebook or youtube and that we will not have to pay an I.T. department to fix issues. There are simply no bugs with this system and it is smaller, faster and easier to use than Windows 8." We asked Steve from the Legacy Best Group about what went wrong. "As computers got faster and gained more resources at an exponential rate, developers took advantage of making sure that over this timeline of 40 some years people would be able to get things done less quickly in exchange for pretty pictures and special mouse cursors." This new paradigm

got the attention of IBM and they overnight released IBM OS/2 Warp 5 Rebound to bring a system that can live up to the responsiveness and resource efficiency of the Commodore 64 to users that have been use to Windows. We asked Dr. Barnes what this OS/2 Rebound offers. "Well our operating system is a beast in comparison to Commodore 64 which only needs 64 kilobytes of memory. Our system requires a whopping 8 megabytes of memory to run smoothly. Although with this extra memory users can run 3 or more videos at a time, have the computer play chess with it's self and allow the user to create a database in IBM Works all at the same time; and it will do it on a 25mhz 80486 without a skip because of our true 30 year old pre-emptive resource dynamic multi-threaded multi-tasking technology that Microsoft could never get right, even with an exponential amount of resources in comparison. We also developed the only ever hardware protection layer that traps memory and address leaks BEFORE they crash the system to give you a chance to

save your work. Ever since OS/2 Warp 3.0 we expunged all software bugs (caused by Microsoft's involvement) back in 1994, an ongoing issue that continues to plague Microsoft today." So departments that want to use their existing computers will like the idea of OS/2 over Commodore 64. However Commodore is reworking Amiga OS to compete directly with IBM. Commodore purports that their OS is written entirely in assembly and because of this their OS will be able to match OS/2's capabilities but with only 640 kilobytes of memory instead of OS/2's recommended 8 megabytes of memory. Bill Gates was caught famously suggesting at Comdex in 1981, "640kb ought to be enough for anybody." That historical milestone lead to the creation of EMM386 and encouraged IBM to divest in Intel and invest in the PowerPC architecture to avoid the memory allocation limits still existent in Intel x86 processors today. Some blame IBM enforcing this limit and if they did, they were causing developers to practice the art of computer programming.

Non-voters reminded to bitch extra following recent election

By Dr. Greenlove :: Fugitive Manchurian Candidate

Dr. Greenlove reveals himself.

A new un-informed yet opinionated group is reminding non-voting Americans that bitching and complaining but not taking action is almost as good as taking action. Freedom Loving Americans for Patriotism's spokesman Mitch Johnson had this to say.

"Just because an American wakes up late on election day doesn't mean they should be forced to vote in order to have their views validated. Same goes for people who forget to register at a new address."

FLAP was formed to remind Americans that other Americans value the first Amendment and freedom of speech whether you vote or not. Non-voting is often seen as a statement in and of itself. FLAP notes on its website but concedes the only people getting the

message is the self serving individual who conforms to the status quo by default of their non-engagement.

"Bitching is just as American as voting!" Johnson exclaimed, adding "At the end of the day I don't want to feel guilty for voting for a guy who later turns out not to do everything I dreamed government would do for me. I just want to be able to get drunk with friends and complain about something. The government is always going to be there so why not make it a scapegoat!?"

FLAP recently encouraged its members to complain on their Facebook pages following the election that choosing between the lesser of two evils is still choosing evil. Not voting is something that the group encourages, claiming that "by choosing to refrain from casting a ballot ensures one that when the candidates are not perfect, the nonvoters conscience at least will be. And that is the foundation for a sound opinion."

Dr. Katalyst's Last Coming

Dr. Root :: A Nut

Dr. Katalyst told the board at multikulti that when his time has come that he would like his soul to leave his body as his body is lit in a flame rolled on a bed of that all enduring female plant. He informed us in his will of what this would signify to the world; that there would be no need to tear down trees, no need to extract oil underground and under oceans leaving big cavities to collapse, no need for expensive chemotherapy, expensive and risky medications, no worries about non-biodegradable waste material's impendance on the environment, no worries about energy abundance and the insurance of the ultimate food source containing everything the body ever needs. In summarization, at the point of his passing everyone would realize that he was the one

likely to be confused with the second coming-- the one that united all and brought forever peace and abundance to the world, only to realize: damn, I could have smoked out with that dude.

General Patton of the Peace Fest says "I got one big enough, however I'd rather we do this before you expire because we just can't wait to get this peaceful revolution going!"
